Novosibirsk, Russia | Relocation: open | Remote / Hybrid

Professional Summary:

VP-level engineering leader with 20+ years of experience scaling high-growth digital platforms and building multi-team engineering organisations (200+ engineers). Proven ability to balance feature velocity with reliability, optimise cloud cost at scale, and align engineering execution with aggressive business growth. Experienced in leading distributed teams in fast-paced, product-driven environments.

Skills:

Digital Leadership & Operating Model

- Digital Operating Model Design
- Portfolio Planning & Governance
- Technology Operations Oversight
- Cross-Functional Alignment
- Change & Transformation Management
- Operational excellence in growth stage
- Cost-aware cloud scaling

Engineering & Delivery Governance

- Software Engineering Leadership
- Release & Delivery Control
- QA & DevSecOps Oversight
- Risk Mitigation & Operational Control
- Executive Reporting & KPI Management

Architecture & Platform Scale

- High-Load Distributed Systems
- Cloud Infrastructure Governance
- CI/CD & Reliability Practices
- Platform & API Architecture

Organisational Leadership

- Leading Leaders & Distributed Teams
- Strategic Planning & Budget Ownership
- Vendor & SLA Governance
- Enterprise Stakeholder Management

Professional Experience:

CTO & Founder

Fincomtech — 2023 – Present

- Built the company from zero — defined the initial product vision, hired the core engineering team and established the first organisational structure and ownership model.
- Designed and implemented a lean operating cadence (prioritisation, sprint rhythm, release control), enabling fast iteration from concept to structured delivery.
- Worked directly with early customers to shape product-market fit, translating commercial discussions into phased roadmaps and realistic delivery commitments.

- Led the development of the first product iteration hands-on with the team, establishing cloud architecture, DevOps foundations and cost-aware scaling practices from day one.
- Drove early enterprise presales, structuring scope, pricing and delivery models aligned with execution capacity.
- Brought the product from concept to pilot stage, securing initial customer implementations and validating both technical feasibility and commercial assumptions.

Deputy CTO

Arammeem — 2018 – 2025

- Scaled a distributed technology organisation to 200+ engineers across multiple product lines, building a strong leadership layer of 14 team leads to support sustained business growth.
- Partnered closely with Product and Commercial leadership to balance feature velocity with platform stability during rapid expansion.
- Established a consistent release cadence and cross-team execution rhythm, shifting the organisation from reactive delivery to predictable, high-velocity shipping.
- Supported business scale from 30K to 300K active users while maintaining service reliability and operational control.
- Reduced critical production incidents by 90% by clarifying ownership, strengthening testing practices and embedding engineering quality standards.
- Introduced structured cloud capacity planning and cost optimisation, reducing infrastructure spend by over 50% while supporting exponential user growth.
- Provided executive-level visibility into delivery health, risks and operational KPIs to enable informed scaling decisions.

CEO & Key Shareholder

Sobit — 2015 – 2018

- Took over the company during a significant commercial downturn and restructured the operating model to stabilise revenue and restore financial control.
- Rebuilt the client base through direct commercial engagement and disciplined cost management, returning the business to sustainable operations.
- Introduced clearer delivery governance and project control mechanisms, improving transparency, accountability and margin predictability.
- Personally negotiated and structured contracts for national and municipal digital projects, balancing scope, delivery capacity and financial risk.
- Reduced operating costs by more than 30% through organizational restructuring and process simplification.
- Maintained long-term relationships with enterprise and public-sector stakeholders, ensuring continuity of revenue and execution stability.

Director of IT Department

CDEK — 2014 – 2017

- Took responsibility for stabilising and modernising the company's core logistics platform, which had accumulated over a decade of technical debt.
- Introduced clearer IT governance and delivery control, bringing structure to planning, prioritisation and release cycles.

- Improved system performance by more than 50% through architectural redesign and database optimisation, supporting business expansion without proportional infrastructure growth.
- Reduced unplanned outages by redefining infrastructure ownership and establishing dedicated operational support functions.
- Shifted the platform toward a more modular and service-oriented structure, preparing it for future integrations and scale.
- Simplified internal service flows and support processes, improving operational efficiency and increasing service reliability.

CTO

RTK Engineering — 2013 – 2014

- Built and led a small technology team to develop a payment platform from inception, defining architecture, compliance alignment and release control in a regulated environment.
- Established basic engineering governance and delivery discipline at early stage.

Director of Software Development

CFT — 2001 – 2013

- Led a 60+ engineering department delivering enterprise-grade transaction platforms for major financial institutions.
- Managed large multi-year implementations across multiple banks, coordinating development, deployment and long-term support in a regulated environment.
- Established structured delivery and support governance, turning client servicing into a recurring revenue model exceeding \$10M annually.
- Worked closely with bank executives, compliance and operations teams during presales, contract negotiations and system rollouts.
- Delivered sustained commercial growth (20% YoY) through disciplined portfolio management and controlled project execution.

Co-Founder / Technical Advisor (AI Products)

AI Product Studio — 2025 – Present

- Advising early-stage AI product teams on architecture, delivery structure and quality control in workflow automation initiatives.

Certificates:

Yandex Cloud Engineer, *Yandex Practicum* – 2024

ICAgile Certified Professional, *ICAgile* – 2013

Education:

BSc in Physics

Novosibirsk State University — 1994 – 1999
